I'm not looking for any way to do this with just a simple "for each" loop, as mentioned in other posts. I'd like to either create a new List and add the child node to each node in the List, or else add the new child node directly to the object and have it be added to every node in the List. I can't quite figure out how I would to do it if I try to make a new List and then copy it into that one object, as that would seem to create a new List. I was thinking of using the List.AddRange method to try and copy the old List into the new one, but it doesn't seem to be the solution, as it just makes the List itself the object. I also considered simply iterating through every item in the NodeList and adding a child node to it, but again, is there a more elegant solution than that? Thanks. A: If you are manipulating the nodes in a collection, consider using LINQ to get that operation done more efficiently: foreach (Node node in myNodeList) { if (node is Child) {

Hello, I am using below jar to connect to oracle database as it requires hadoop client library. com.oracle.jdbc.ojdbc6 11.2.0.3.0-2 But I got below exception while running my application: java.sql.SQLException: Io exception: The Network Adapter could not establish the connection where as it is working fine for oracle database. Please help. Thanks in advance. A: The exception was caused because of firewall in the remote server. I'm using oracle ojdbc6 which has to be installed in the client machine. "They play at our level," said McDaniel Coach Tom Reed. "They defend well. They're physical. They play hard all the time. It's just a matter of executing better in different areas." McDaniel (5-5) lost to Markham Central (6-4) in the Class 2A Region II tournament on Thursday. Two weeks earlier, McDaniel lost to Seymour-Osceola, a Class 2A North Sub-Section runner-up, in a first round game. "I had a good game plan with a lot of physical teams," McDaniel Coach Tom Reed said. "I thought we played a good half. It just didn't finish." The Thunderwolves, winners of their region, held a 25-24 lead going into the final period. McDaniel tried to rebound on Carter Bergman's 2-pointer, but got fouled. Bergman missed the free throw, and the Thunderwolves had possession. "We were playing well," Reed said. "We were hitting, making free throws. We tried to switch everything up and get a good shot." After an inbounds pass to Bergman, McDaniel was forced to foul. McDaniel's defense forced the Thunderwolves to miss their first seven shots, including turning the ball over. "We knew where to hit him," McDaniel guard K.D. Wilson said. "We knew we could take him to the basket." McDaniel led by as many as nine points in the first quarter, but the Thunderwolves went on a 7-0 run to f678ea9f9e
